

Video Magnifiers

WHAT IS A VIDEO MAGNIFIER?

A video magnifier or closed-circuit television (CCTV) system uses a stand-mounted or handheld video camera to project a magnified image onto a video monitor, a television (TV) screen, or a computer monitor.

POTENTIAL USES OF A CCTV

A CCTV can be used for reading any printed material (books, documents, magazines and newspapers) and is especially helpful when you need to read instructions on medicine bottles, check an invoice or your bank statement. Other uses are for hobbies when you need magnification for your knitting, crochet or stamp collection and for important jobs like removing splinters from fingers and checking

out the gemstones in your new engagement ring!

HOW MUCH DOES A CCTV COST?

Some schools and other organisations, such as Vision Australia, have CCTVs which they will lend to users.

If you want to buy a new CCTV, however, this will

INFO SHEET—VIDEO MAGNIFIERS

cost you between \$2790 (Australian Independence Products) and \$7000.00, depending on the size and the features. Sometimes the manufacturers will have reconditioned ones which are cheaper.

CHOOSING YOUR CCTV

Your decision as to which brand or model of a CCTV to buy will be governed by your personal needs. Decide what you want your CCTV to do for you and then talk to suppliers and explain what you want.

For example, if you need a portable CCTV for school or work, you need one which is light enough to carry about easily, which can be easily set up in new locations and which can fit into a backpack or carry case.

Talk to friends who already have a CCTV and also seek information from agencies in the field, such as your

State's blindness agencies. The Albinism Fellowship of Australia has an online forum where you can ask advice from members.

WHAT QUESTIONS SHOULD I ASK A SUPPLIER?

The following list suggests some of the questions to consider when deciding what CCTV to buy. The list is not exhaustive and you may be able to think of other questions relevant to your own needs:

1. How does it handle colour? And can you change it from black on white, to white on black?
2. Is it simple to use?
3. How well does it cope with instructions on curved surfaces, such as medicine bottles?
4. Does it give good reproduction of photographs and illustrations?

5. Do you need it for reading text only, or for viewing illustrations?
6. Can you use it for help with activities such as knitting; removing splinters etc.?
7. Can the tray (where you place your reading material) be locked?
8. Is the size of the tray big enough for your needs?
9. What size screens are available?
10. Do you need a full colour model or only black and white?
11. Does the machine give the option of viewing black on white, white on black or other colour combinations?
12. Are the controls easy to use and conveniently placed?
13. If you need one which is portable, is it easy to move from place to place?
14. If portable, can it be connected to a laptop?

3 INFO SHEET—VIDEO MAGNIFIERS

15. Does the tray reflect too much light – causing glare?
16. Is it easy to view material when raised above the surface of the tray?
17. Can the screen be angled i.e. turned to the side if needed to be used in conjunction with a computer?
18. Is simple maintenance, such as changing light globes, easy to do?
19. Can the height of the machine be easily adjusted?
20. Does the machine give the level of magnification you need?
21. Does it come with clear operating instructions?
22. Is there good after-sales service?
23. Can you take the model home for a free-trial period?
24. Is the information provided up-to-date?
25. If you buy one from overseas, through eBay

for instance, will it work in an Australian setting e.g. can you change the adaptor plug?
